

# The new T4 system: built for stainless steel cable

easy installation  
maximum adjustability  
smaller footprint

The T4 is the first and only automatic pool cover system designed for stainless steel cables

**Stainless Steel Innovation**

At Cover-Pools, we pride ourselves on being the only automatic pool cover manufacturer offering high strength stainless steel cable as an alternative option to nylon rope. Using stainless steel cable means less frequent pool cover adjustments and easier fabric replacements.

**The Cover-Pools Advantage**

Cover-Pools is the world's leading manufacturer of automatic safety pool covers. In 1959, we invented the automatic pool cover—a cover that could be used daily and offer safety, maintenance, and heat-saving benefits to all swimming pool owners. At Cover-Pools, we strive to stay current

with the latest pool design trends by generating new and innovative ways to cover any pool.

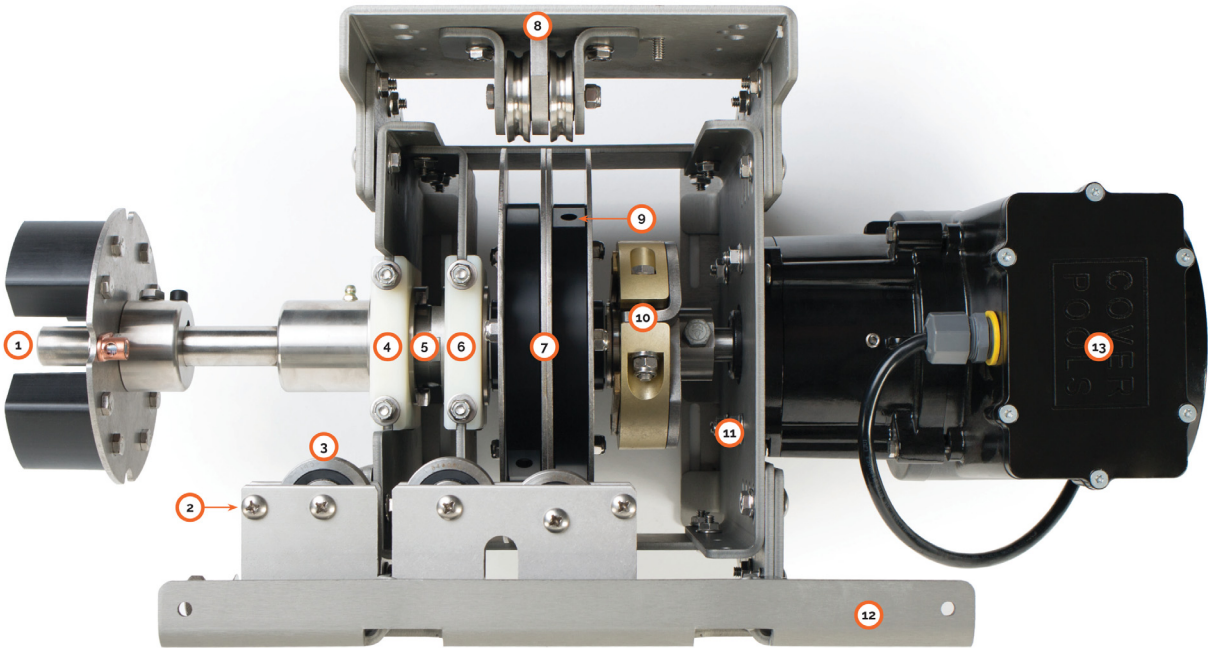

Today, we are committed to being the market leader in automatic pool covers. We offer cover sales programs for dealers, builders, service companies, pool supply retailers, and other pool

industry professionals. To ensure our dealer's success, Cover-Pools provides the highest level of customer service in the industry.

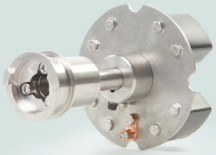

Industry's Shortest Electric Footprint: 22-inches

- 1 Adjustable CorrResist End Hub
- 2 All Stainless Steel Hardware
- 3 Large 1½" Pulleys
- 4 Drum Brake
- 5 Positive/Sure-Shift Drive
- 6 Reel Brake
- 7 Auto-Tension CorrResist Cable Reels with Adjustable Diameter

- 8 Vertical Pulleys (poolside)
- 9 Quick-Cable Attachment
- 10 Industrial Grade Slip Clutch or AutoStop Option (not shown)
- 11 Thick Hard-Coated Anodizing on Marine-Grade Aluminum Brackets
- 12 Quick Install Cradle
- 13 New Condensed Motor with Potted Capacitor

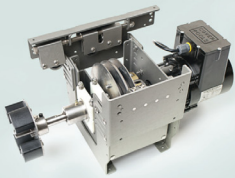

**Easy Installation**

- Separate mounting cradle contributes to a quicker installation
- Only need to turn a screw instead of taping fabric
- What was once a two-man job is now a one-man job

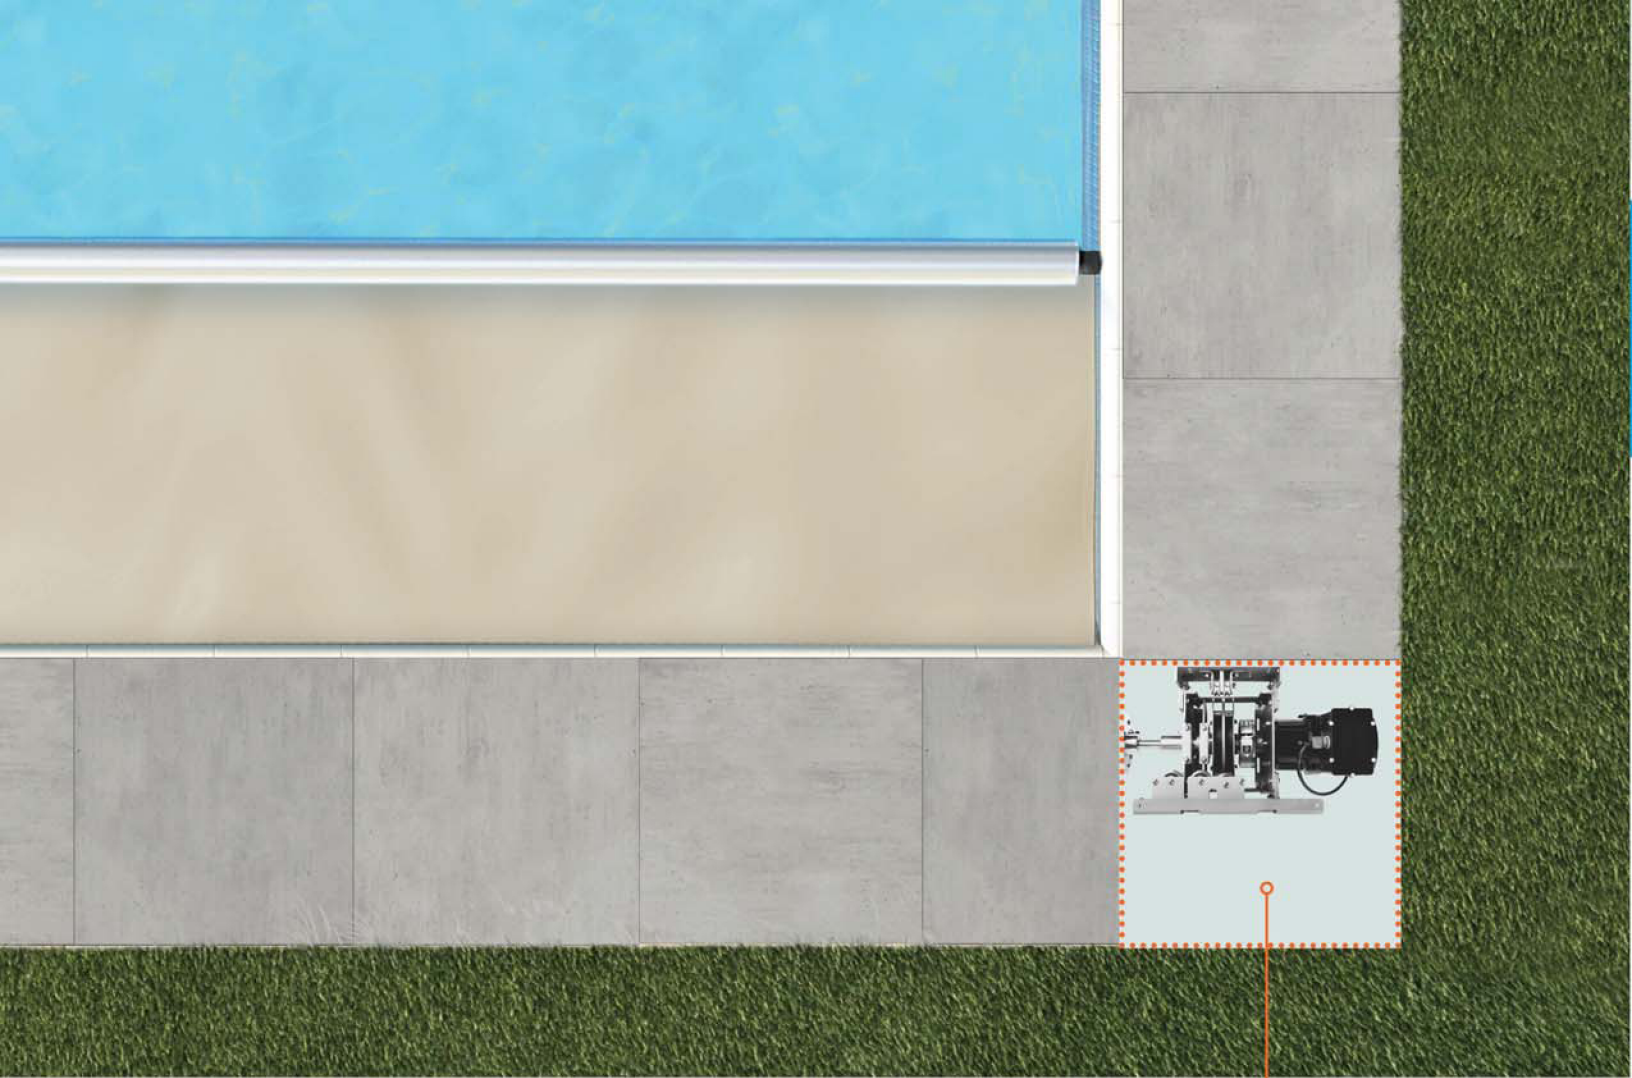

**Maximum Adjustability**

- Steel Cable Reels
- Torsion springs help keep tension on the cables
- Diameter Adjustment helps keep the leading edge square so it closes flush with the pool

**Smaller Footprint**

- 7" smaller than current mechanism
- Fits 20.5" motor end vs 28"
- 24" box requirement vs 32"
- Thinner cable reels
- New shifting mechanism uses less space and has smoother shifting

#### The Stainless Steel Cable Advantage

Using stainless steel cable instead of nylon rope means less frequent pool cover adjustments and easier fabric replacements.

As you know from experience, with a rope system, the rope eventually stretches causing misalignment. Stainless steel cable, on the other hand, never stretches or shrinks. With a more advanced and better performing steel cable system, less maintenance is required from you.

#### Seamless Design Integration

The T4's smaller footprint allows for seamless integration into the pool design, creating a more aesthetically pleasing pool environment.

With a smaller motor and mechanism, the T4 fits a 24-inch box vs. a 32-inch box. The smaller design can be covered with a standard 24-inch square coping stone, enhancing the appearance of your customer's pool and providing a more tailor-made look.
